Tar Spot of Trees and Shrubs

What is tar spot? Tar spot is a common, locally destructive and generally cosmetic leaf spot disease. The spot can affect many species of maple, including our native Norway maple, sugar maple and red maple. The spots are usually 1-2 cm in diameter, but can be larger. The spots are usually 1-2 cm in diameter, but can be larger. The spots are usually 1-2 cm in diameter, but can be larger.

Tar Spot of Trees and Shrubs Quiz

Take the Quiz! Get a perfect score! Earn the medallion!

Questions may have more than one correct answer. Be sure to select all answers that are correct.

If you don't get a perfect score, you can take the quiz again until you do!

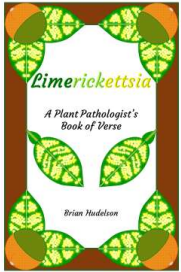

Please provide your email address to receive your digital medallion.
